

Cscape EnvisionFX

File Transfer Software for Operator Control Stations

Transfer files
between your PC and
OCS via a graphical
interface.

Transfer files between your PC and OCS units having removable memory cards with software specifically designed for OCS.

Cscape™ EnvisionFX (File Transfer) is a low-cost, Windows® based software application that allows you to easily transfer files between your PC and the XL, NX and QX series Operator Control Stations via a graphical interface. Horner's Operator Control Stations combine a controller, I/O, operator interface and networking into one convenient unit using a single programming package called Cscape.™

EnvisionFX uses the Horner CsCAN protocol to transfer files, giving you the flexibility to support various communications options including: Ethernet, serial, wireless, telephone, CAN and cellular. With CsCAN you can easily connect EnvisionFX to a single unit on your CsCAN network and transfer files to/from any supported OCS device on the network seamlessly.

Envision the benefits...

- Transfer files from OCS removable media such as MicroSD™ or CompactFlash™ without having to remove memory cards
- Copy, move and rename local and remote files
- Use the tool bar to copy and paste files or drag and drop files between windows
- Project Manager allows you to define a set of sites and controllers for faster file transfers
- Advanced scripting support allows for batch processing and scheduling automatic file transfers
- Transfer receive data, data logs, screen captures and more

System Requirements:

Microsoft Windows XP or Vista
400 MHz Pentium II or better,
40 MB disk space for installation,
internet access for activation and
XL , NX, or QX series OCS.

Windows is a registered trademark of Microsoft Corporation in the United States and other countries.
